

## GPS / GIS MAPPING

New Jersey Water Association is dedicated in providing services to small water and wastewater systems to assist operators and utilities with their daily operations, maintaining compliance with all the relevant regulations. We are excited to inform all the systems that we have added GPS/GIS mapping into the portfolio of our services. Following a team effort, our staff put together an effective workflow using cutting-edge equipment and processes.

**Using the latest hardware and software available, our trained staff can help with your mapping needs.**

The enactment of the Water Quality Accountability Act (WQAA) in October 2017, mandated that each water purveyor with more than 500 connections should identify the geographic location of each fire hydrant and water valve (except for the service connections and customer shut-off valves).

Furthermore, NJDEP has issued the final municipal storm water renewal permits for Tier A and B municipalities on November 9, 2017 that became effective January 1, 2018. Under the NJPDES MS4 general permit there is a requirement for the inspection, maintenance, and upkeep of several storm water management features such as culverts, outfalls and storm drain inlets.

We can help you meet the requirements of the Act (WQAA) and create a digital, easily accessible and editable inventory of all your assets that will make your day to day operations more efficient. This is the best way to prepare and implement your Asset Management Plan.
