

ZCorr Advanced Digital Leak Detection System

New Jersey Water Association
54 Main Street
Waretown, New Jersey 08758

ZCorr is a portable leak detection system that combines a network of digital correlating loggers (DCLs), a computer docking station and easy-to-use sound analyzing software. Using ZCorr, water providers can strategically target a section of distribution system pipe and pinpoint the exact locations of any leaks within the defined coverage area in a single night. ZCorr enables the placement of the ZCorr DCLs and analyze and review the overnight recording results—all from the comfort and convenience of the office.

The NJWA has four loggers available to aid in leak detection of small water utilities. This item is brought on site and deployed, retrieved and analyzed. Further leak detection can be enhanced with a DLD (Digital Leak Detector)

This system is ideal in finding leaks within your small water utility. Call our office to-day to schedule.

The Advantages of ZCorr?

1. Performs Correlations Exactly Like a Correlator (pinpoints exact distance to leak)
2. Can Operate at Night in "Overnight Survey" (less traffic and usage noise)
3. Can Turn ON Multiple Times With Hours Between Recordings (best chance to get leak sounds without usage noises)

About New Jersey Water Association

The New Jersey Water Association (NJWA) is a statewide association that offers membership to all water and wastewater utilities in New Jersey. The NJWATER staff covers the entire state to provide on-site technical assistance with Consumer Confidence Reports (CCR), line location, leak detection services, groundwater protection planning and educational outreach to schools.

Our Mission: "To enable our water and wastewater membership to safeguard the health of their users by providing leadership and professional services."
